

## ■ DATA SHEET: TIMERS ZR5B0025

### ■ SCHRACK-INFO

- Asymmetric flasher, 2-time multifunction
- 7 Time ranges
- Wide input voltage range
- 2 change-over contacts
- Width 35 mm
- Installation design

### ■ TECHNICAL DATA

#### 1. Functions

The function has to be set before connecting the relay to the supply voltage.

Ip	Asymmetric flasher pause first
li	Asymmetric flasher pulse first
ER	ON delay and OFF delay with control contact
EWu	ON delay single shot leading edge voltage controlled
EWs	ON delay single shot leading edge with control contact
WsWa	Single shot leading and single shot trailing edge with control contact
Wt	Pulse sequence monitoring

#### 2. Time ranges

Time range	Adjustment range	
1 s	50 ms	1 s
10 s	500 ms	10 s
1 min	3 s	1 min
10 min	30 s	10 min
1 h	3 min	1 h
10 h	30 min	10 h
100 h	5 h	100 h

#### 3. Indicators

Green LED U/t ON: indication of supply voltage  
 Green LED U/t slow flashing: indication of time period t1  
 Green LED U/t fast flashing: indication of time period t2  
 Yellow LED ON/OFF: indication of relay output

#### 4. Mechanical design

Self-extinguishing plastic housing, IP rating IP40  
 Mounted on DIN-rail TS 35 according to EN 50022  
 Mounting position: any  
 Shockproof terminal connection according to VBG 4 (PZ1 required),  
 IP rating IP20  
 Tightening torque: max. 1 Nm  
 Terminal capacity:  
     1 x 0.5 to 2.5 mm<sup>2</sup> with/without multicore cable end  
     1 x 4 mm<sup>2</sup> without multicore cable end  
     2 x 0.5 to 1.5 mm<sup>2</sup> with/without multicore cable end  
     2 x 2.5 mm<sup>2</sup> flexible without multicore cable end

#### 5. Input circuit

Supply voltage: terminals A1(+)-A2  
 Types ZR5B0025  
 12-240 V AC/DC  
 Tolerance: 12 V-10% to 240 V+10%  
 Rated frequency: 48 to 63 Hz  
 Rated consumption: 6 VA (2 W)  
 Duration of operation: 100%

Reset time: 100 ms

Residual ripple of DC: -

Drop-out voltage: >30% of the supply voltage

Oversupply category: III (according to IEC 60664-1)

Rated surge voltage: 4kV

#### 6. Output circuit

2 potential free change over contacts  
 Rated voltage: 250 V AC  
 Switching capacity: 2000 VA (8 A / 250 V)  
 Fusing: 8 A fast acting  
 Mechanical life: 20 x 10<sup>6</sup> operations  
 Electrical life: 2 x 10<sup>5</sup> operations  
 at 1000 VA resistive load  
 Switching frequency: max. 60/min at 100 VA resistive load  
 max. 6/min at 1000 VA resistive load  
 (according to IEC 947-5-1)  
 Oversupply category: III (according to IEC 60664-1)  
 Rated surge: 4 kV

#### 7. Control input

Input not potential free: terminals A1-B1  
 Loadable: yes  
 Max. line length: 10 m  
 Trigger level (sensitivity): automatic adaption to supply voltage  
 Max. control pulse length: DC 50 ms / AC 100 ms

#### 8. Accuracy

Base accuracy: ±1% of maximum scale value  
 Adjusting accuracy: ≤5% of maximum scale value  
 Repetition accuracy: <0.5% or ±5 ms  
 Voltage influence: -  
 Temperature influence: ≤0.01% / °C

#### 9. Ambient conditions

Ambient temperature: -25 to +55 °C (according to IEC 68-1)  
 Storage temperature: -25 to +70 °C  
 Transport temperature: -25 to +70 °C  
 Relative humidity: 15% to 85%  
 (according to IEC 721-3-3 class 3K3)  
 Pollution degree: 2, if built in 3  
 (according to IEC 664-1)  
 Vibration resistance: 10 to 55 Hz 0.35 mm  
 (according to IEC 68-2-6)  
 Shock resistance: 15 g 11 ms  
 (according to IEC 68-2-27)

## FUNCTIONS

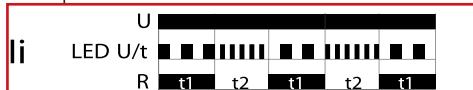

### Asymmetric flasher pause first (Ip)

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

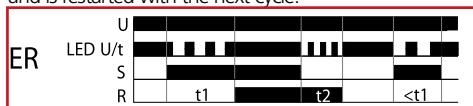

### Asymmetric flasher pulse first (Ii)

When the supply voltage U is applied, the output relay R switches into on-position (yellow LED illuminated) and the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay switches into off-position (yellow LED not illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into on-position (yellow LED illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

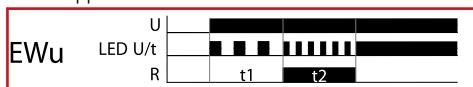

### ON delay and OFF delay with control contact (ER)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated). If the control contact is opened, the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). If the control contact is opened before the interval t1 has expired, the interval already expired is erased and is restarted with the next cycle.

### ON delay and single shot leading edge voltage controlled (EWu)

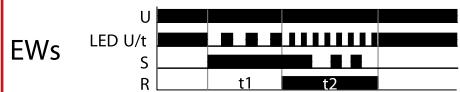

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). If the supply voltage is interrupted before the interval t1+t2 has expired, the interval already expired is erased and is restarted when the supply voltage is next applied.

### ON delay and single shot leading edge with control contact (EWs)

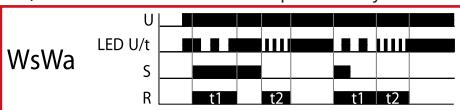

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated).

During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

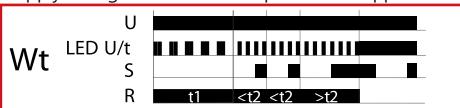

### Single shot leading and single shot trailing edge with control contact (WsWa)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (yellow LED illuminated) and the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into off-position (yellow LED not illuminated). If the control contact is opened, the output relay again switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times.

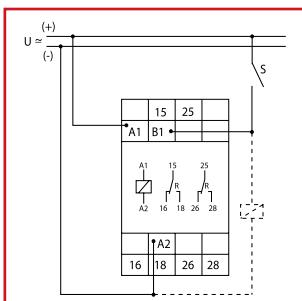

### Pulse sequence monitoring (Wt)

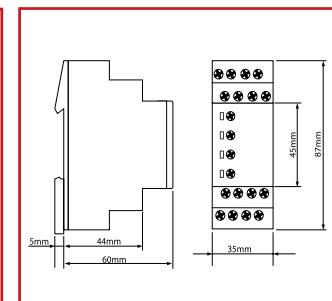

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly) and the output relay R switches into on-position (yellow LED illuminated). After the interval t1 has expired, the set interval t2 begins (green LED U/t flashes fast). So that the output relay R remains in on-position, the control contact S must be closed and opened again within the set interval t2. If this does not happen, the output relay R switches into off-position (yellow LED not illuminated) and all further pulses at the control contact are ignored. To restart the function the supply voltage must be interrupted and reapplied.

## CONNECTIONS

## DIMENSIONS

## WEIGHT

Single packing: 106g

## ARTICLE NUMBER

DESCRIPTION	ORDER NO.
Timerelay, 7 functions, 12-240VAC, 2 change over, 8A/250V	ZR5B0025
