Tools

Hand tools, automatic tools, ferrules, and connectors

The right tool for every application

As a manufacturer of professional processing and measuring tools, Phoenix Contact is your expert partner for all industrial and manual applications. Our range of tools features a comprehensive portfolio of quality hand tools for cutting, stripping, crimping, mounting, and testing. Automatic tools for cutting, stripping, and crimping for the fast and precise processing of wires and cables round out the tool range. We thereby ensure that all tasks in the process chain can be performed professionally.

1 Hand tools

Robust and ergonomic: work conveniently and safely with the professional and durable hand tools.

Tool quality, expertise, and knowledge

The Phoenix Contact tool range is characterized by precision, durability, and effectiveness. It also features impressive convenient handling and high quality. We produce our tools in highly specialized manufacturing processes in accordance with applicable standards, directives, and legal regulations. Conscious of our responsibility to the environment, production at our manufacturing site in Sweden conserves resources and is sustainable.

Purchasing

Right from the procurement phase of all raw materials and components for our tools and automatic devices, we place the highest requirements on quality.

Development

We develop innovative products that impress – our development focuses on ergonomics, user-friendliness, efficiency and safety.

Production

Our qualified experts deliver high-quality products. A comprehensive machine park and the most modern manufacturing processes are available for this.

Quality assurance

We guarantee the highest quality standards across the entire process chain. We guarantee adherence to these standards through regular checks with the latest testing processes and procedures.

Advice and service

Do you need support? Our expert team will gladly advise you in all matters regarding products and applications.

Conductors and cables

Wires, conductors, and cables serve the purpose of carrying electrical signals or energy. In everyday conversation, cables are often equated to wires, as both versions generally consist of several conductors that are isolated from each other. Cables, however, have increased mechanical resistance, which allows use in the ground, underwater or even unprotected outside. The conductor (also called wire) consists of a conductive core of copper or aluminum, in addition to insulation. Copper is preferred, due to its excellent electrotechnical properties.

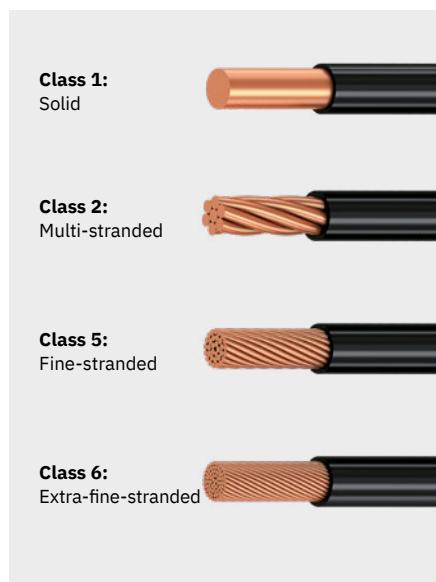

In the IEC/DIN EN 60228 (VDE 0295) standard, the conductor cross-sections are defined by the electric conductance or resistance values. These values are the basis for determining the maximum current carrying capacity. Geometrical data, in particular cross-section tolerances, is not specified here. As a result, the actual cross-section can deviate substantially from the nominal cross-sections. By using copper, which today has a purity of up to 99.99%, the manufacturer is in a position to replace the actual copper cross-section with one of more than 10% less. This presents a challenge when it comes to crimping.

The IEC / DIN EN 60228 (VDE 0295) divides conductor into four classes of flexibility, which classifies the basic flexibility of the conductors. The criteria for this are the individual wire diameters and the number of individual wires.

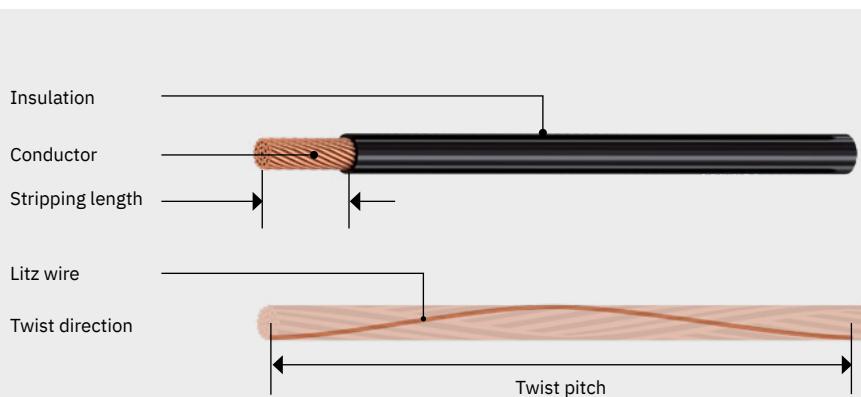

A further influence on the inherent stability is the twist pitch. The twist pitch refers to the length of an individual wire that is required for a 360° rotation. The lower the twist pitch, the more rigid and compact the conductor is. This also increases the outside diameter.

The insulation serves as a permanent divider between the individual conductors as well as a protective casing against external influences. The basic requirement from the insulation material is the greatest possible electrical resistance; however, the corresponding resulting warmth can detract from this. Today, the choice of insulation is above all plastic, in all its versions. The type and properties of the plastic decide the later possibility of use for the conductors, cables, and wires.

A further criterion is the strength of the insulation. This directly influences the mechanical and electrical loading capacity. The condition of the insulation (such as hardness, durability, thickness,...) is furthermore decisive when choosing the right stripping tool.

Conductor classes in accordance with
IEC / DIN EN 60228 (VDE 0295)

Standard conductor structure

Conductor pull-out test

Crimping points can be affected by tensile forces during wiring or operation. Therefore, properly crimped connectors and ferrules must offer a high degree of mechanical safety. To test the tensile load capacity, a crimped conductor is exposed

to a predefined, cross-sectional tensile force for a period of 60 seconds, and it must withstand this load. The tensile force exerts stress on the conductor at the crimping point. Damage to the crimping point must not occur. Generally, even the

maximum tensile force is tolerated, until the connection is destroyed.

Gas tightness in crimp connections

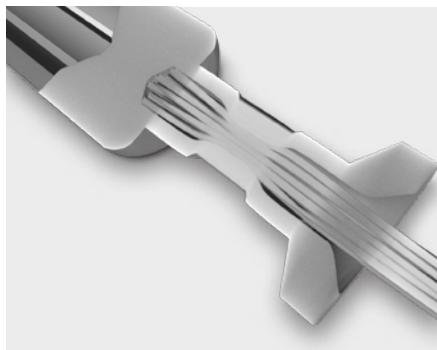

A gas-tight crimp connection is the result of a defined crimping procedure. The wire strands in one or more conductors and a connector are joined into a largely homogeneous structure, with no clearances. This results in a durable, reliable connection that cannot be detached. In addition to the mechanical and electrical properties to be tested, a visual observation of the connection provides key information on the quality of the connection. To this end, micrographs or images are captured by means of computer tomography. The porosity, elongation at break, and the deformation of the individual wire strands is assessed in this way.

A correctly executed crimp procedure is largely protected from gases such as sulfur-dioxide containing industrial environments, oxygen, salt spray, or other corrosive media. This prevents corrosion during the service life of the individual wire strand and that the electrical properties deteriorate as a result. The crimp connections of ferrules cannot be compared directly with connectors or cable lugs. They must be considered differently. Ferrules are used as splicing protection for class 2, 5, and 6 copper conductors, that are flexible and highly flexible. The copper sleeve of the ferrule only has a material thickness of 0.15 to 0.45 mm. It is significantly thinner than

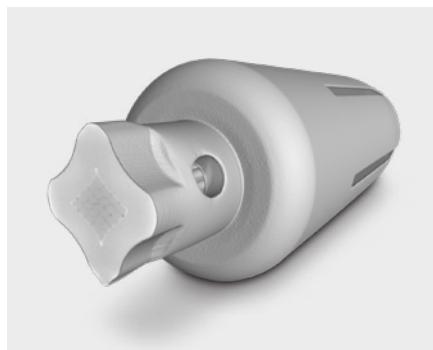

that of cable lugs, for example. If the copper sleeve of a ferrule with a conductor cross-section of 2.5 mm^2 has a material thickness of 0.3 mm, the material thickness of a comparable cable lug is 0.8 mm. DIN 46228 (parts 1-4) describes the mechanical testing and the envelope dimension check as of 2.5 mm^2 for class 5 copper conductors in accordance with IEC 60228. The electrical properties are evaluated together with the later application of the connection, e.g., within a terminal block. In harsh environments, corrosion-free contact areas are a real prerequisite for low-resistance and therefore high-performance connections. For this reason, the secure positioning of the connection in the terminal point must be ensured. The impact of aggressive media on the terminal point is evaluated in the terminal block standard for copper conductors. The voltage drop in accordance with DIN EN 60947-7-1 must not exceed a value of 3.2 mV before or after the test, nor must it exceed 1.5 times the value measured at the start of the test. In a gas-tight connection, it is assumed that the test object fulfills requirements of a test in a condensation changing climate with an atmosphere containing sulfur dioxide in accordance with DIN 50018 (AHT 2.0 S). This test consists of storage in a condensation changing climate with changing air humidity and temperatures.

In the first test section, the test object is exposed to an SO_2 volume concentration of 0.67% at a temperature of 40°C and a humidity of approx. 100% for 8 hours. After this test, the test objects are left to dry for 16 hours with the door open. This cycle is executed twice, before the test objects are assessed.

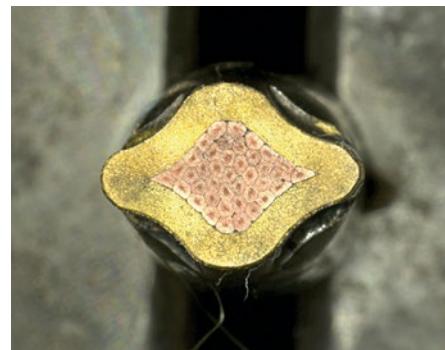

When used correctly at contact points, Phoenix Contact crimping tools and connectors achieve a permanent gas-tight connection that cannot be impaired even by aggressive substances. Even aggressive media do not impact this connection.

1,000 V tests in accordance with EN 60900

In the strict safety regulations for working on live parts up to 1,000 V AC and 1,500 V DC, VDE-insulated tools take on a key role in addition to general safety measures. International standard IEC 60900 places very stringent requirements on insulated tools. In addition to specifications regarding the geometry and dimensions, this standard primarily defines the properties of the insulation material. Comprehensive tests complete the standard.

As such, the condition of the insulation and the inscriptions undergo a visual test. An impact test checks the resistance of the insulation layer to impacts. Breakages, flaking or cracks must not occur, even at low temperatures (-25°C or -40°C depending on the category). After an indentation test (semi-sphere with 5 mm diameter), the insulation is exposed to 70°C with 20 N for two hours. After cooling, the test pick-off must not exhibit any electrical disruptive discharge, flashover or sparkover over a period of three minutes while a voltage of 5 kV is applied (RMS value).

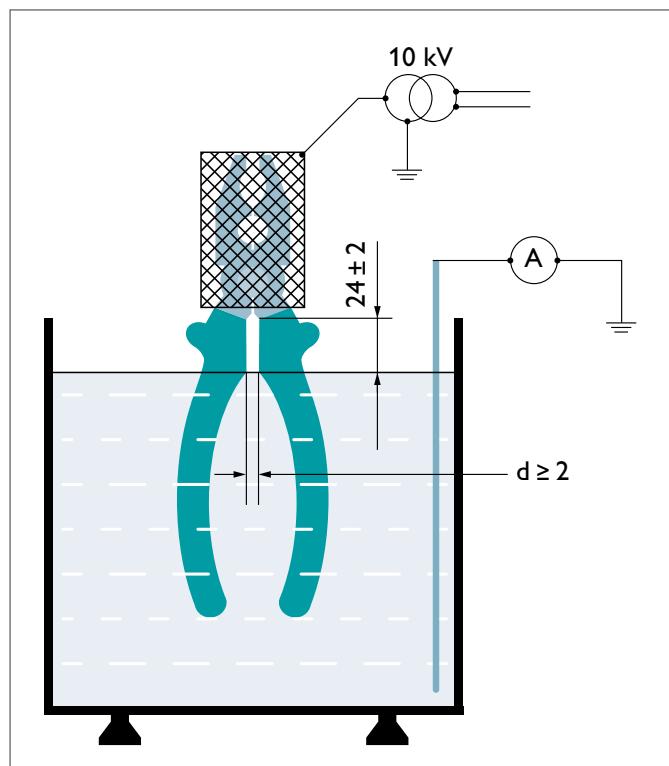

In dielectric tests, pre-conditioned tools (water bath or humidor storage) are exposed to a voltage test. A voltage of 10 kV is applied for three minutes. The discharge current must be less than 1 mA per 200 mm coating length of the hand tool.

Further tests are based on the adhesion strength of the insulation coating, the inscriptions' resistance to chemicals, and the combustion behavior. The positive outcome of the type proofing of a tool forms the basis for using the VDE logo, in conjunction with IEC 60900. Regular inspections of production sites and test centers are also made by the appropriate VDE approval body. Among other things, this involves taking random product samples from ongoing production and assessing them.

The manufacturer carries out comprehensive testing, during production that ensure that all of the requirements of the IEC 60900 are adhered to. The last hurdle is the test for electric strength. Each tool is tested at 10,000 V AC. Only

after passing this test can a tool be referred to as VDE-certified and released for sale.

The VDE-insulated and correspondingly marketed tools from Phoenix Contact provide the user with high quality and the greatest possible degree of safety when working with live parts up to 1,000 V AC and 1,500 V DC.

Device for voltage tests of insulated hand tools (DIN EN 60900 Figure 15)

Marking on a VDE tool: The letter "C" indicates that it may be used at low temperatures

Cutting and stripping

Cutting

Cable processing starts with the trimming or cutting of the conductor or cable.

Conductors and cables in a wide range of sizes, shapes, and insulation can only be processed professionally and permanently with quality tools. Optimum leverage means that you only need to apply low manual force to generate maximum force in the cutting area.

When it comes to cutting conductors and cables in the upper cross-section range up to 1,400 mm², ratchet-driven cable cutters are the solution. Here, the finely stepped down drives also keep the required manual force to a minimum.

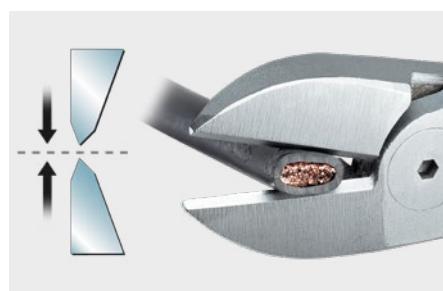

Both versions, with direct and indirect force transmission, feature special cutting geometries which help to ensure ease of movement and can be relied upon to produce burr-free right-angle cuts. Accidental deformation of the conductor is thereby prevented. The cutting method described above, which is also known as shear cutting, is listed under the generic term "splitting" in DIN 8588. The two

blades move toward and past one another and cut (shear) the material without burring.

Bite cutting involves two wedge-shaped blades which move toward one another to cut the material. The wedge angle set for the blades is deliberately large and therefore stable. In addition to the hardening of the entire tool, the cutting area is subsequently hardened again inductively. This makes it possible to sever even extremely hard materials such as piano wire and spring steel with a tensile strength of up to 2,300 N/mm² without damaging the tool. Bite cutting is suitable only to a limited extent for cutting through cables and lines.

Shear cutting

Bite cutting

Stripping

Stripping is the next step in the manufacturing process for creating a reliable crimp connection. In this case, a distinction is made between stripping and removing the sheath.

Stripping is used as a generic term as well as to describe the removal of insulation from conductors up to 16 mm². Removal of the sheath describes the stripping process for large conductor cross-sections and multi-strand or multi-layered lines and cables.

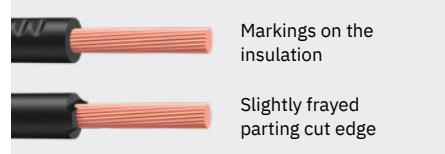

Insulation can be removed professionally and quickly using the right stripping or removal tool. The length of insulation to be removed varies depending on the terminal point and connector. This is set by means of adjustable limit stops and ensures consistent stripping lengths.

When the insulation is removed, make sure that neither the single wires inside nor the braided shield are damaged.

The remaining insulation must not be damaged by the grip pressure, although pressure points on and color changes

in the insulation material are permitted. Further faults that need to be prevented are stipulated in DIN IEC 60352-2.

Blade geometries suitable for the application in question are used to process special insulation materials. V blades are used for both hard (e.g. Teflon/RADOX[®]) and soft rubber insulations (silicone). In contrast to the straight blade geometry, V blades cut the insulation all the way round, thereby reducing the tear-off force. Phoenix Contact provides a wide range of removal and stripping tools for convenient, safe processing of different conductors, cables, and wire types.

Correctly stripped conductor in accordance with DIN IEC 60352-2

Stripping errors in accordance with DIN IEC 60352-2

Crimping, pressing, and crushing

Crimping describes the mechanical joining of the contact and conductor.

In addition to crimping, two further terms are used, based on standards. The type of deformation plays a decisive role here. Based on the type of contact, a distinction is made between:

- Crushing, for insulated cable lugs
- Pressing, for ferrules, uninsulated cable lugs, and similar enclosed connectors

When processing spade connectors, for example, this is called crimping. In order to establish a reliable connection between the contact and conductor, a number of important points must be considered:

- The conductor must be processed correctly
- The conductor and the contact must be compatible
- The conductor must be positioned correctly in the contact

- Select the correct crimping tool
- The conductor and contact are placed in the designated die nest of the pliers

Professional crimping pliers are always equipped with a pressure lock that can be unlocked. It unlocks as soon as the required crimping pressure is applied. This rules out the possibility of too little pressure. It ensures consistent crimping results for the user with maximum possible pull-out values.

Automatic or semi-automatic crimping machines are often used when large numbers of contacts need to be processed.

The DIN EN 60352-2 and DIN EN 60999-1 standards are among the references used to subsequently assess crimping results. In addition to a variety of electrical and mechanical tests, conductor pull-out tests are the decisive criterion.

All tools in the CRIMPFOX product family from Phoenix Contact are adjusted and tested according to the applicable standards. These tools ensure long-term stable crimping.

We recommend checking the crimp quality every 5,000 cycles or once per year, using suitable, calibrated test equipment.

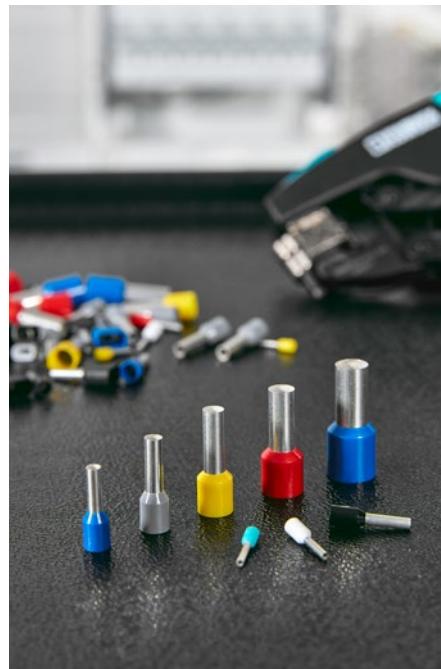

Ferrules

For secure and reliable connections

Ferrules are useful tools for conductor processing and wiring. Using sleeves prevents the potential splicing of individual litz wires, thereby enabling effective and, above all, reliable further processing. Ferrules thus facilitate insertion into the clamping shaft and protect the individual litz wires against mechanical impact, for example during connection to screw terminal blocks.

Advantages of ferrules

- Process reliability, fast wiring
- Reliable connection, even with repeated rewiring
- Increased, long-term operational safety and contact reliability
- Permanently low contact resistances
- Easy cross-section detection
- Increased vibration resistance
- Individual litz wires are protected (particularly for screw terminal blocks)

Scan the QR code and discover our poster on the topic of ferrules. You will find everything you need to know and tips on handling at a glance.

Ferrules for process-reliable conductor processing and wiring

Colors of the ferrules

The color of the plastic collar indicates the cross-section of the ferrule and thus facilitates assignment to the corresponding conductor. The color definition of DIN 46228-4, which is also the basis for UL 486F, is the primary standard in terms of acceptance among users.

Cross-section	DIN 46228-4	UL 486F	NF C 63-023	Special color code
0.14 mm ²		■ Gray		■ Gray
0.25 mm ²		■ Yellow		■ Light blue
0.34 mm ²		■ Turquoise	■ Green	■ Turquoise
0.50 mm ²	□ White	□ White	□ White	■ Orange
0.75 mm ²	■ Gray	■ Gray	■ Blue	□ White
1.00 mm ²	■ Red	■ Red	■ Red	■ Yellow
1.50 mm ²	■ Black	■ Black	■ Black	■ Red
2.50 mm ²	■ Blue	■ Blue	■ Gray	■ Blue
4.00 mm ²	■ Gray	■ Gray	■ Orange	■ Gray
6.00 mm ²	■ Yellow	■ Yellow	■ Green	■ Black
10.00 mm ²	■ Red	■ Red	■ Brown	■ Ivory
16.00 mm ²	■ Blue	■ Blue	■ Ivory	■ Green
25.00 mm ²	■ Yellow	■ Yellow	■ Black	■ Brown
35.00 mm ²	■ Red	■ Red	■ Red	■ Beige
50.00 mm ²	■ Blue	■ Blue	■ Blue	■ Olive

Standards for ferrules

In DIN 46228, the ferrule is defined as being between 0.5 and 50 mm². This standard has four parts:

- Part 1: blank shape without plastic sleeve
- Part 2: Crimp-type end-splices, with and without insulation grip
- Part 3: Conductor-embracing end-splices, without insulation grip
- Part 4: Tubular end-sleeves with plastic sleeve

Alongside the geometric dimensions of the sleeve, the material, the coloring in accordance with the cross-section, and the test specifications are all part of the standard. In addition, there is the requirement that the ferrules accommodate Class 2, 5, and 6 conductors. The conductor cross-sections are defined by the electrical resistance values and not, as is the case for the ferrules, by the geometric dimensions. Greater variations in cross-sections are therefore possible. Due to this fact,

there is a certain discrepancy between the ferrule and the conductor. However, Phoenix Contact ferrule pliers are largely designed to compensate for this difference in size.

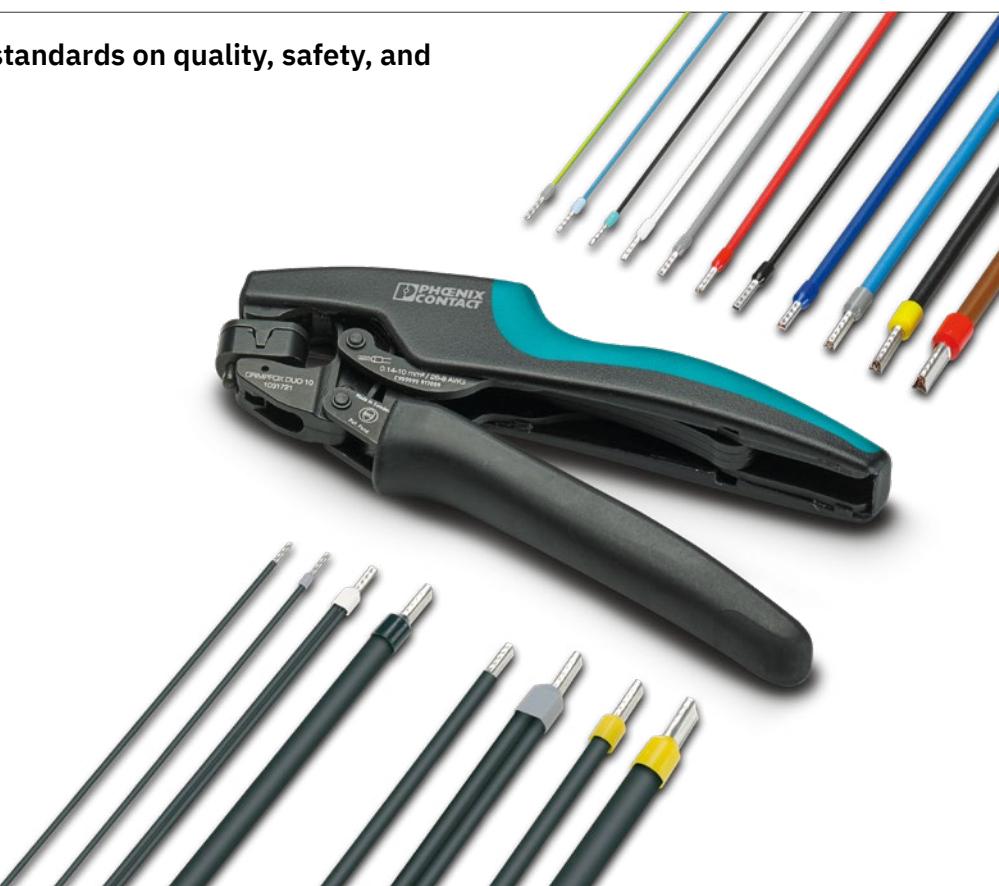

In addition to DIN, there is a French standard for the sleeves, NF C 63-023. With the exception of the coloring for some cross-sections, the NF standard is based on the DIN standard. UL 486F and the Canadian C22.2 NO. 291-14 are new when it comes to the standardization of ferrules. These harmonized standards are also based on the DIN, but go further into detail on the test methodology and the specific requirements.

In UL 486F, special sleeves such as the TWIN ferrules for two-conductor connection are also defined in a standard for the first time. For certification in accordance with the UL and CSA standards mentioned above, comprehensive testing must be carried out by the relevant organization. Not just the ferrules are tested and certified, but also the entire

system consisting of the ferrule pliers and ferrule.

Trailblazer for international standards on quality, safety, and compatibility

Phoenix Contact was one of the first manufacturers to have ferrules combined with a selection of crimping tools and crimping devices certified in accordance with the UL 486F standard that came into force in 2016. Together with conformity with the DIN 46228-1/-4 standard (updated 03/2020), it meets the global market requirements for quality, safety, and compatibility, offering a system that is accepted worldwide to export-oriented users.

Connectors

The crimp connections have been tested millions of times in all areas of industry; automotive technology, air travel, the transport industry, and in medical devices.

Connectors are also known as crimp contacts. They come in a wide range of versions and designs. They are divided into two main groups: the large, turned connectors or contacts are referred to as closed; the punched, rolled connectors or contacts are called open.

In the electrical installation, these crimp connections fall under the heading of solder-free electrical connections. The scope of service as well as test specifications are described in the European standard DIN EN 60352-2.

Crimping is a joining process to permanently connect one or more conductors with a contact. A stripped conductor is inserted into the crimp zone of the contact and connected by means of a specific crimping process. This results in a durable, reliable connection that cannot be detached.

The following key groups make up the different connector types, with a large range of dimensions and conductor cross-sections:

- Punched-rolled contacts
- Turned contacts
- Hard-soldered crimping cable lugs
- Tubular and compression cable lugs
- Butt connectors
- Insulated crimping cable lugs
- Pin cable lugs
- Uninsulated and insulated ring cable lugs
- Uninsulated and insulated fork-type cable lugs
- Uninsulated and insulated slip-on sleeves
- Coaxial CATV connectors

Robust and ergonomic

Hand tools for cutting, stripping, crimping, mounting, and measuring: our comprehensive range of tools features high-quality hand tools for all industrial and trade applications. The hand tools are characterized by their quality, precision, durability, and effectiveness. When using our tools over a long period of time, you benefit from ergonomically designed handles and consistent processing quality.

CUTFOX cutting tools

Cut and trim conductors, cables, and other materials to length easily and with minimal effort.

➤ More information starting on page 18

WIREFOX stripping tools

Reliably strip all types of conductors with standard or special insulation.

➤ More information starting on page 28

CRIMPFOX crimping tools

Crimp all types of contacts safely and effortlessly.

CUTFOX cutting tools

Implement professional, permanent processing of conductors and cables up to 1,400 mm² and diameters up to 100 mm with ergonomic tools from Phoenix Contact. Our CUTFOX product family features particularly robust and tempered cutting tools in various designs. It includes the ideal tool for every application for a chip-free, crush-free cutting result.

Your advantages

- ✓ Durable with specially hardened and tempered cutting
- ✓ Minimum effort due to optimum leverage and cutting geometry
- ✓ Low-impact and low-fatigue use due to the ergonomic handle design

Effortless, clean cutting results

Electrician's scissors

The electrician's scissors feature a wide range of applications and are incredibly durable. The specially shaped handles and the use of high-quality materials ensure ergonomic handling.

Cable cutters

Thanks to their special cutting geometry, the cable cutters ensure optimum results. The ergonomically designed handles support comfortable working. With their optimum ratchet mechanism, the ratchet cable cutters can be operated easily and effortlessly.

Diagonal cutters

The VDE-insulated diagonal cutters with inductively hardened precision cutting ensure long-term stable cutting performance and therefore a clean cut, for both soft and hard wires (piano wire).

DIN rail cutters

With the DIN rail cutters, you can cut standard DIN rails without burrs, without chips, and without reworking. The PPS STANDARD and PPS CLASSIC can also punch holes and elongated holes.

Cable duct cutters

You can use the cable duct cutters to cut cable ducts and their covers up to a width of 125 mm quickly and easily.

Special cutting tool

The CUTFOX-FBS cutting tool is suitable for cutting out individual bars from FBS ... plug-in bridges from the CLIPLINE complete range. FB... screw bridges can be cut to length with the CUTFOX FB without crushing them.

Accessories

You will find suitable accessories for profile and DIN rail cutters as well as cable duct cutters in our online shop, including:

- Various punch sets for long and round holes
- Hydraulic cylinders
- Measuring rails
- C-clamps
- Replacement stops and blades
- Zero-cut adapters

An overview with the corresponding accessories is provided for each item.

WIREFOX stripping tools

The WIREFOX product family provides the perfect tool for every form of stripping. The stripping tools impress with their ergonomics and good, precise results. The hardened blades with special geometries ensure maximum durability. The WIREFOX stripping tools can strip all types of conductors and cables reliably, quickly, and cleanly. Appropriate tools are available for standard and special types of insulation.

Your advantages

- ✓ Sustainable and flexible in application with easily replaceable blade cassettes
- ✓ Low-fatigue and non-slip handling due to the ergonomic handle design
- ✓ Durable due to the use of high-quality components and raw materials

Precise and safe stripping

Self-adjusting stripping pliers

The self-adjusting stripping pliers from Phoenix Contact are an indispensable tool for precise and efficient work in the field of electrical installation.

With their innovative self-adjusting mechanics, they automatically adapt to various conductor cross-sections. This saves time and enables consistently high stripping quality. The hardened blades ensure a long service life. The structural design of the stripping pliers enables easy replacement of the blade cassettes. Basic pliers therefore cover a range of applications.

The ergonomic design also ensures effortless working. Phoenix Contact offers a reliable solution for professional requirements with this product family.

Stripping tools for stripping

Phoenix Contact's stripping tools are specifically designed for the precise processing of wires and cables.

The range includes tools for standard and special insulation for you to choose from. They enable the external insulation layer to be removed quickly without damaging the inner conductor. The ergonomic handle shape ensures low-fatigue handling, while the high-quality components guarantee a long service life.

The stripping tools from Phoenix Contact provide a reliable solution for professional requirements, whether in industry or the trades.

CRIMPFOX crimping tools

With the crimping tools from the CRIMPFOX product family, you can process any contact connection type – ferrule, cable lug or coaxial connector – professionally and safely. Optimized leverage and the ergonomic geometry of the crimping tool handle enables fatigue-free and convenient working. The integrated pressure lock ensures long-term stable, high-quality, gas-tight quality crimping.

Your advantages

- ✓ Easy and convenient handling due to the ergonomic handle design
- ✓ Efficient wire processing with optimized leverage
- ✓ Process-reliable processing of ferrules and connectors with the integrated pressure lock and precision tool design

Professional crimping

Crimping pliers

The crimping pliers from Phoenix Contact ensure the reliable and precise processing of ferrules, cable lugs, connectors, and many other contact material types. With their ergonomic design and high-quality materials, the crimping pliers provide optimum power transmission and ensure comfortable working.

Self-setting crimping pliers

The self-setting crimp mechanism ensures ideal, reproducible crimping results. The integrated pressure lock ensures that the process is fully completed. In addition, the pliers also cover a large cross-section range.

“Four-mandrel” crimping pliers

With the universal setting option, the CRIMPFOX-TC MP “four-mandrel” crimping pliers enable the precision processing of a large number of turned contacts. The digital display simplifies setting of the crimping dimension.

Universal crimping pliers

The universal crimping pliers are characterized by the quick, tool-free replacement of the crimp inserts. The receptacle and a variety of different crimping and pressing inserts make them a space-saving universal tool for all applications.

Parallel crimping pliers

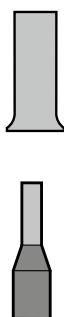

The parallel crimping pliers ensure symmetrical and optimum crimping results through the parallel motion sequences of the dies. The integrated positioning tool ensures that the contacts are perfectly aligned.

Multifunctional crimping pliers

The CRIMPFOX 4 IN 1 multifunctional crimping pliers allow you to handle conductors and ferrules quickly and easily while saving up to 30 percent of working time. Using only one tool, you can implement various work steps: cutting, stripping, twisting, and crimping.

CRIMPFOX crimping tools

Self-setting crimping pliers

- Self-adjusting crimping die
- Integrated fall protection
- Compact, lightweight, and optimally balanced
- Low grip span
- Ergonomic two-component handle
- Low actuation force
- Suitable for TWIN ferrules
- Handle with non-slip pad
- Tool-free unlockable pressure lock
- Length 180 mm

CRIMPFOX crimping tools

Multifunctional crimping pliers

- Cutting, stripping, twisting, and crimping in one tool
- Tool-free magazine change for ferrules
- Length stop for stripping
- With pressure lock
- Length 180 mm

Type	Item no.	Connector	Crimp	Cross-section range	
				mm ²	AWG
CRIMPFOX 4 IN 1	1200101¹⁾			0.5 ... 2.5	20 ... 14

CRIMPFOX 4 IN 1 – one tool, four functions

The CRIMPFOX 4 IN 1 multifunctional crimping pliers allow you to handle conductors and ferrules quickly and easily while saving up to 30 percent of working time. Using only one tool, you can implement various work steps: cutting, stripping, twisting, and crimping.

An effective handling process enables all steps to be performed without putting the tool down. The cross-section can be conveniently changed throughout the range of 0.5 to 2.5 mm² in a matter of seconds by replacing the ferrule magazine which is equipped with taped products.

1. Cutting

2. Stripping

3. Twisting

4. Crimping

SCREWFOX screwdriver tools

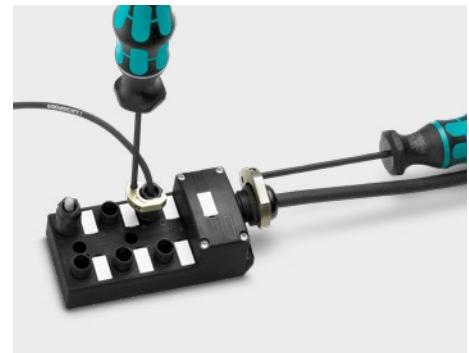

The screwdrivers from the SCREWFOX product family are tailored to a variety of different screws. This is particularly true of the products in our terminal block range. The ergonomically designed screwdriver handles ensure that the required torque is transferred with a reasonable amount of force. Adjustable torque and cordless screwdrivers complete the product range.

Your advantages

- ✓ Durable with specially hardened and tempered screw blades
- ✓ High torque transmission with the special two-component handle geometry
- ✓ The right tool for every application with our comprehensive product range

Precision at every turn

Screwdrivers

The screwdriver tools are equipped with ergonomic two-component handles. This enables effortless working, while transmitting maximum power and thereby enabling a secure hold. Optimum blade shapes guarantee a secure hold in the screw and prevent slipping.

Cordless screwdrivers

The SF-ASD 16 cordless screwdriver is a handy tool for connecting conductors to screw connections. You can use the cordless screwdriver in a straight or angled position, even in confined spaces. The 16-step torque setting with a switch for clockwise/counter-clockwise operation integrated into the handle makes the tool not just comfortable, but also versatile and suitable for a wide variety of screwing applications.

Torque screwdrivers

The portfolio includes preset and adjustable torque screwdrivers, which ensure that every screw connection is tightened with a constant force. The precise adjustment of the torque minimizes the risk of overtightening and damage to the screws and components, which increases the safety and durability of the assembled parts.

Attachments for cordless screwdrivers and bit hand holders

The hardened bits are suitable for hard and soft screws. Optimum edge geometries increase the bearing surface and prevent the screws from being over-tightened.

Control cabinet keys

The universal control cabinet keys for all common closures complete the SCREWFOX portfolio.

Sets

With the bit sets in a compact and clear format and equipped with the most common screw bits, you always have the right tool for every situation to hand.

TESTFOX testing and measuring tools

The testing tools and measuring tools in the TESTFOX product family are ideal for all applications in industry, electrical installation, and servicing. The high-quality tools are tested and approved in accordance with national and international standards. With its high degree of protection, you can use the testing tool both indoors and outdoors.

Your advantages

- ✓ Robust and durable due to the use of special shockproof plastic materials
- ✓ High level of functionality: all standard measuring tasks in a single compact device
- ✓ Reliable results: elimination of inaccurate measurements due to reactive voltage

TESTFOX testing and measuring tools

Voltage and continuity testers

- DC and AC voltage tests in the voltage range from 12 V to 1000 V AC/DC, fully functional even without batteries
- Polarity test (+/-) for DC voltage
- Single-position test of the line conductor
- Rotary field direction display of a three-phase mains, provided the neutral point is grounded
- Measuring point lighting
- Load connection via pushbutton
- Overvoltage category CAT IV 600V and CAT III 1000 V in accordance with IEC/EN 61243-3
- Vibration alarm for safe voltage detection
- Impact-resistant, dust- and splash-proof housing, IP65
- Audible and optical continuity test

Type	DUSPOL EXPERT
Item no.	1209091
AC voltage range	12 V AC ... 1000 V AC
DC voltage range	12 V DC ... 1000 V DC
Continuity test	0.00 Ω ... 108.00 kΩ (acoustically via buzzer (55 dB), optically via LED)
Frequency	0.00 Hz ... 60.00 kHz
Degree of protection	IP65
Measuring category	CAT IV 600 V / CAT III 1000 V
Test certificate	EN/IEC 61243-3 (VDE 0682 Part 401)

Measuring tape

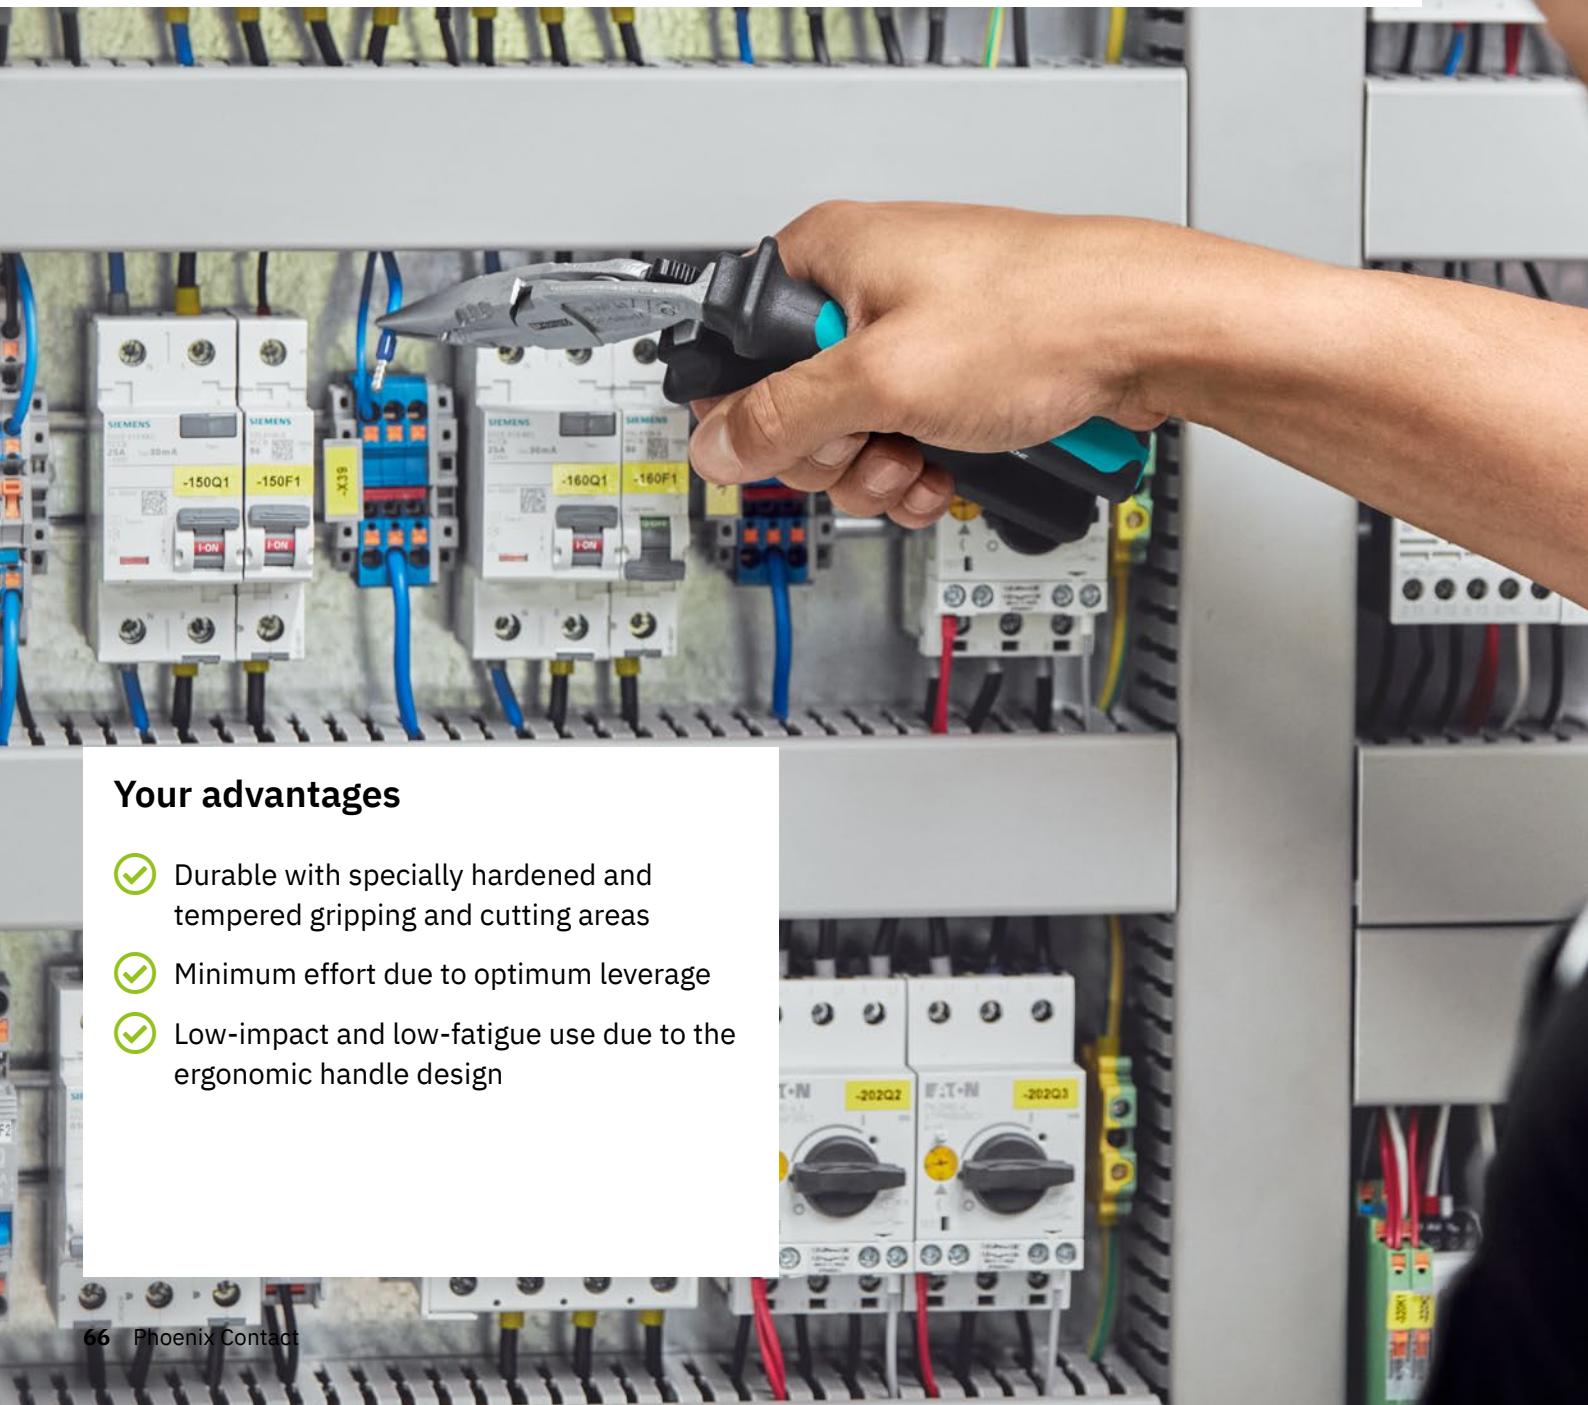

- Robust and versatile use
- Abrasion resistant, easily-read scale
- Easy internal and external measurements, thanks to the movable, magnetic hooks
- With automatic tape feed and locking mechanism
- EC accuracy class 2

Type	Item no.	Version	Maximum pull-out length
MEASURING TAPE 5M	1200298	Metric	5 m
MEASURING TAPE 5M I/M	1200304	Imperial/metric	5 m

UNIFOX universal and special tools

The UNIFOX product family from Phoenix Contact comprises a wide variety of tools for different applications: from universal tools, which combine several functions, and cable binder tools, to cable duct cutters - we offer a whole host of applications. With the universal tool you can combine different functions and always have the right tool for control cabinet work, for example.

Your advantages

- ✓ Durable with specially hardened and tempered gripping and cutting areas
- ✓ Minimum effort due to optimum leverage
- ✓ Low-impact and low-fatigue use due to the ergonomic handle design

Versatile use

Combination pliers

The VDE-insulated combination pliers are available in straight and ergonomic, angled form with spring reset, with interlocking gripping surfaces, integrated M8 - M10 ring key, and blade.

Needle-nose pliers, flat-nose and round-nose pliers

The ergonomically shaped UNIFOX-PE VDE has an opening spring and a locking mechanism. The stripping and crimping unit for ferrules from 1.5 to 2.5 mm² and the integrated M8 ... M10 ring key make the tool multifunctional.

Screw/water pump pliers

The notched gripping surfaces of the UNIFOX-WP ensure an optimum grip. The UNIFOX-WRENCH has flat gripping surfaces to avoid damage to the surfaces.

Cable tie tools

Tension and cut cable ties in one step with the ergonomic cable tie tools for plastic and stainless steel cable ties. The continuously adjustable tension force is indicated by a scale in the handle area. If the tension force is reached, the remainder is automatically severed for a flush finish.

Mounting and removal tools

You will find the right mounting and removal tools for various crimp contacts.

MICROFOX electronics tools

The electronics tools from the MICROFOX product family offer a range of pliers for all tasks in electronics and electromechanical engineering. The sophisticated and precise electronics tools are ideal for working in hard to access areas such as PCB components. To protect sensitive electronic components, we recommend the ESD versions with special handles.

Your advantages

- ✓ Protect electronic components with the ESD design
- ✓ Ultra-precise: low tolerances during production
- ✓ Durable due to the use of high-quality components and raw materials
- ✓ Reliable hold and comfortable working with ergonomically designed two-component handles

Precision and reliability for every PCB

Electronics pliers

MICROFOX electronics pliers feature a through-connected joint for permanent stability and optimum distribution of force. The surfaces are finely polished and oiled. They are equipped with an opening spring that allows for working with just one hand. The two-component handles provide for non-slip and effortless use. The gripping surfaces of the tools are designed flat to avoid damage when gripping and bending components.

ESD electronics pliers

The MICROFOX ESD electronics pliers conform to applicable standards and regulations including DIN EN 61340-5. The screwed precision joint ensures optimum results. The metal surfaces are mirror-polished and then phosphate-treated to ensure that there is no glare when working. To protect highly sensitive electronic components against electrostatic discharge, the handles of the electronics pliers are made from conductive plastic. This means that electrostatic energy is discharged in a gradual and controlled manner.

Storing tools neatly and safely

When working on site, it is particularly important to have clear and quick access to the right tools. With one of our tool sets, you'll always have the right tool to hand whatever the job. We provide tool sets in a variety of robust and heavy-duty bags.

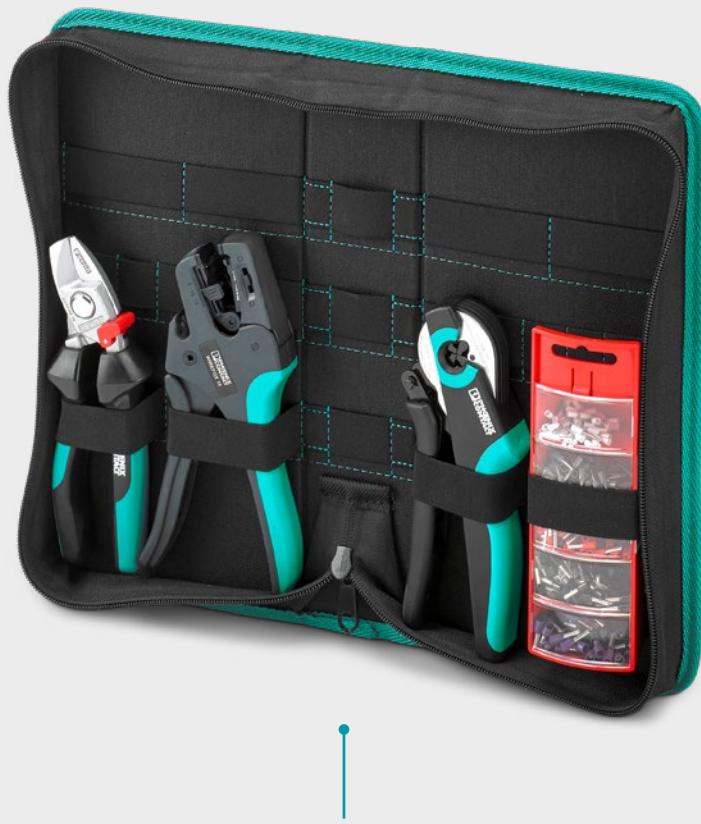

Toolbags

From soft zip cases to hard cases: robust toolbags in various designs

➤ More information starting on page 80

Your custom tool set

Configure your tool set to meet your individual requirements. The configurable items contain the extension "CUS" on the website and are marked accordingly. Simply select the desired bag in the product list and specify the desired tools under "Configure".

Automatic tools

Precision and speed

Our range of tools features automatic tools for cutting, stripping, and crimping for the fast and precise processing of conductors and cables. Increase your wire processing efficiency with our automatic tools by automating these three substeps. The combination of functionality, quality, and fast setup times enables high levels of flexibility while ensuring high-quality results every time.

Automatic cutting devices

Cut rigid and flexible conductors and cables up to 10 mm² and 8 mm diameter to length with millimeter precision. When there is a change in material, the automatic cutting device automatically adapts to the newly inserted diameters.

➤ More information starting on page 90

Automatic stripping devices

Strip various types of conductors reliably and with repeat accuracy. The compact automatic stripping devices can be used to automatically strip wires with a cross-section of up to 10 mm², and also provide the option of partial stripping.

➤ More information starting on page 92

Automatic crimping devices

Process cable lugs, slip-on sleeves, and ferrules in the shortest time. The dies can be replaced quickly and easily, which makes the automatic crimping device ideal for processing a wide range of contact connection types up to 50 mm².

➤ More information starting on page 96

E.FOX S 10 automatic stripping device

With the E.FOX S 10 electric automatic stripping device, you can process wires with different insulations and in the cross-section range of 0.08 to 10 mm² easily and efficiently. The compact automatic stripping device can be integrated into and controlled via worker assistance systems. The touch display makes operation intuitive. Set favorites can be linked to a barcode and accessed using a handheld scanner.

Automatic stripping and crimping devices

Two functions in one device: process wires quickly and reliably in just one step with our automatic stripping and crimping devices.

➤ More information starting on page 100

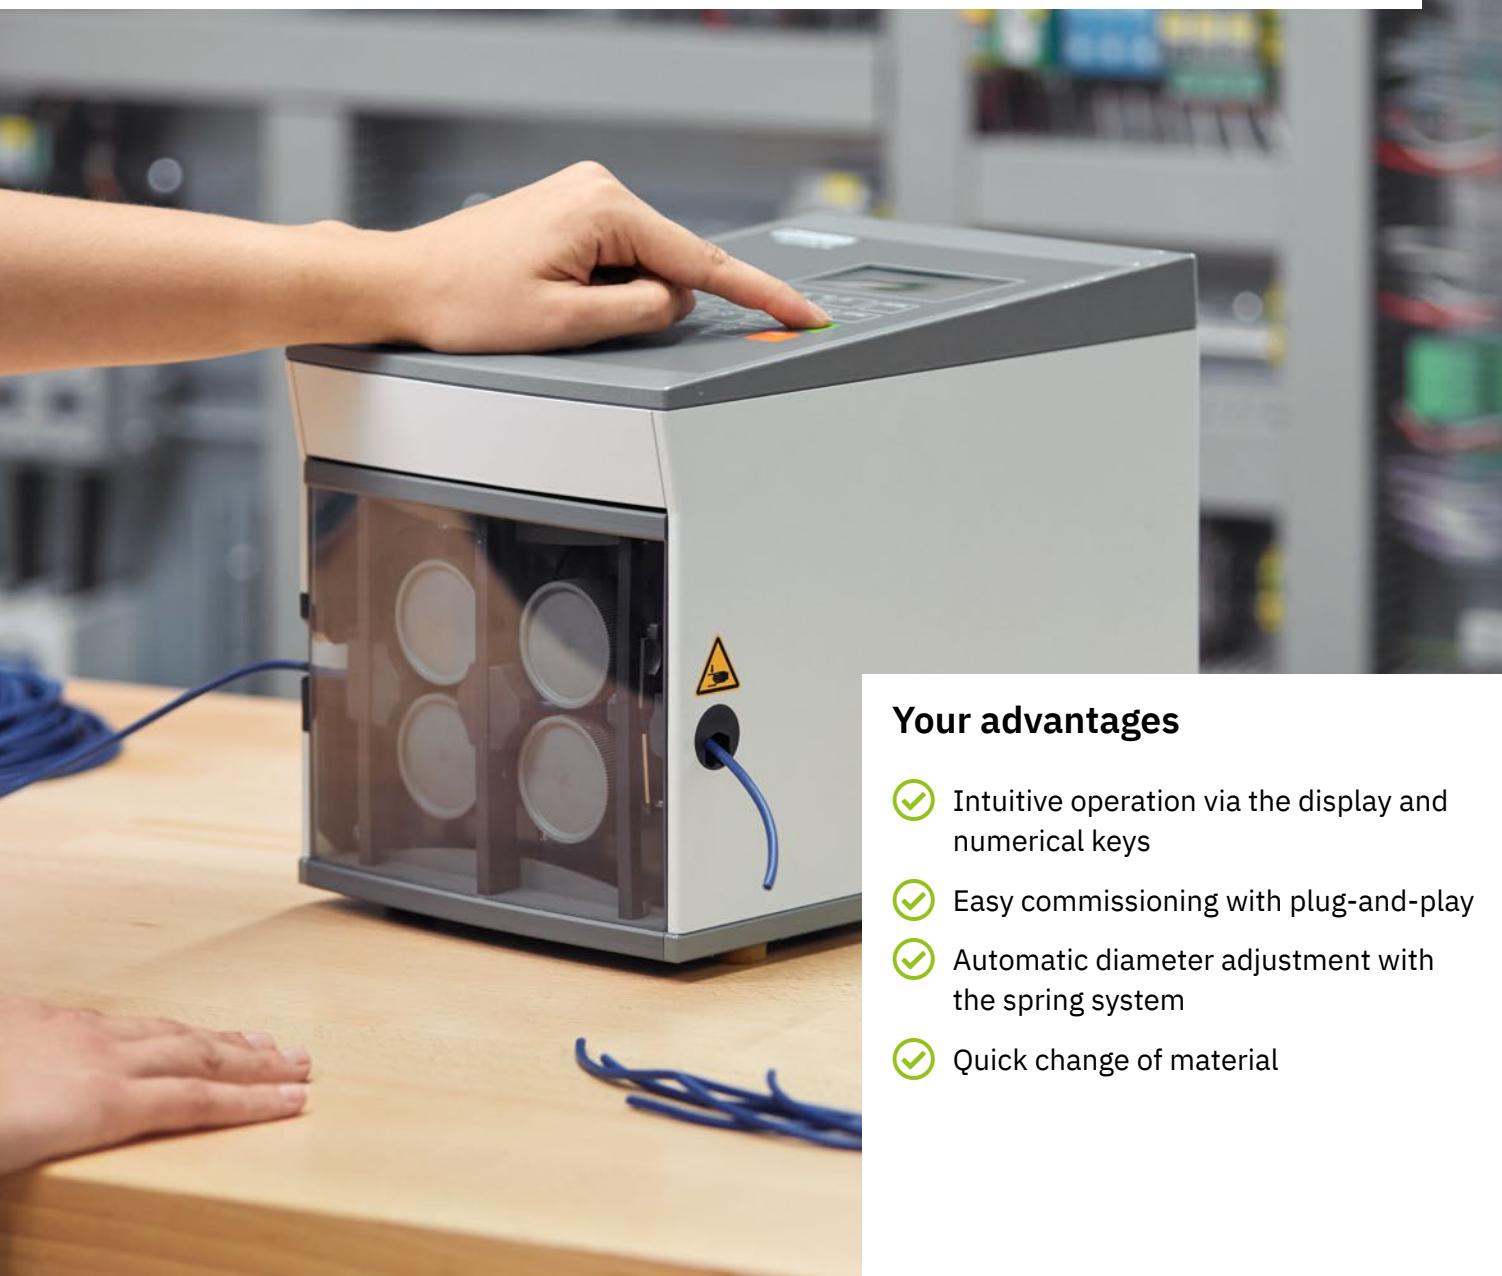

Portable automatic stripping and crimping device

With the compact and portable automatic stripping and crimping device, it takes just two seconds to assemble the wires.

➤ More information starting on page 104

Automatic cutting devices

The CUTFOX 10 automatic cutting device can be used to cut conductors and cables up to 10 mm² and 8 mm in diameter to length with millimeter precision. The CUTFOX 10 automatically adapts to the diameter when there is a change in material. Enter the length and number of cuts via the user-friendly display. The automatic cutting device can be optimally integrated into the clipx WIRE assist worker assistance system and automatically controlled with the software.

Your advantages

- ✓ Intuitive operation via the display and numerical keys
- ✓ Easy commissioning with plug-and-play
- ✓ Automatic diameter adjustment with the spring system
- ✓ Quick change of material

Automatic cutting devices

	Information		Properties
	Type	Item no.	CUTFOX 10 1206829
	Conductor cross-section, flexible		0.08 mm ² ... 10 mm ² AWG 28 ... 8
	Conductor cross-section rigid		0.08 mm ² ... 2.5 mm ²
	Max. conductor diameter		≤8.00 mm
	Cross-section setting		Automatic
	Max. number of cuts		9999
	Cutting length		2 mm ... 999999 mm
	Unit of measurement		mm/inch
	Feed rate		0.5 m/s
	Dimensions (L x W x H)		301 mm x 194 mm x 228 mm
	Weight		11 kg
	Power consumption		150 VA
	Supply voltage		100 V ... 240 V (50 Hz ... 60 Hz)

Accessories

Type	Item no.	Description
CF-10 CUTTER KNIFE SET	1207284	Replacement blade
CUTFOX 10 C-UN	1208393	Cable unwinder
CF-10 CUTTER KNIFE SET	1207284	Replacement blade
CF-10 WHEEL SET	1207271	Replacement drive rollers
CF-10 WHEEL SET PU	1200098	Drive rollers with PU tread, for sensitive cables/conductors
CF-10 WHEEL SET STEEL	1200099	Drive rollers with finely knurled steel tread, for very hard insulation

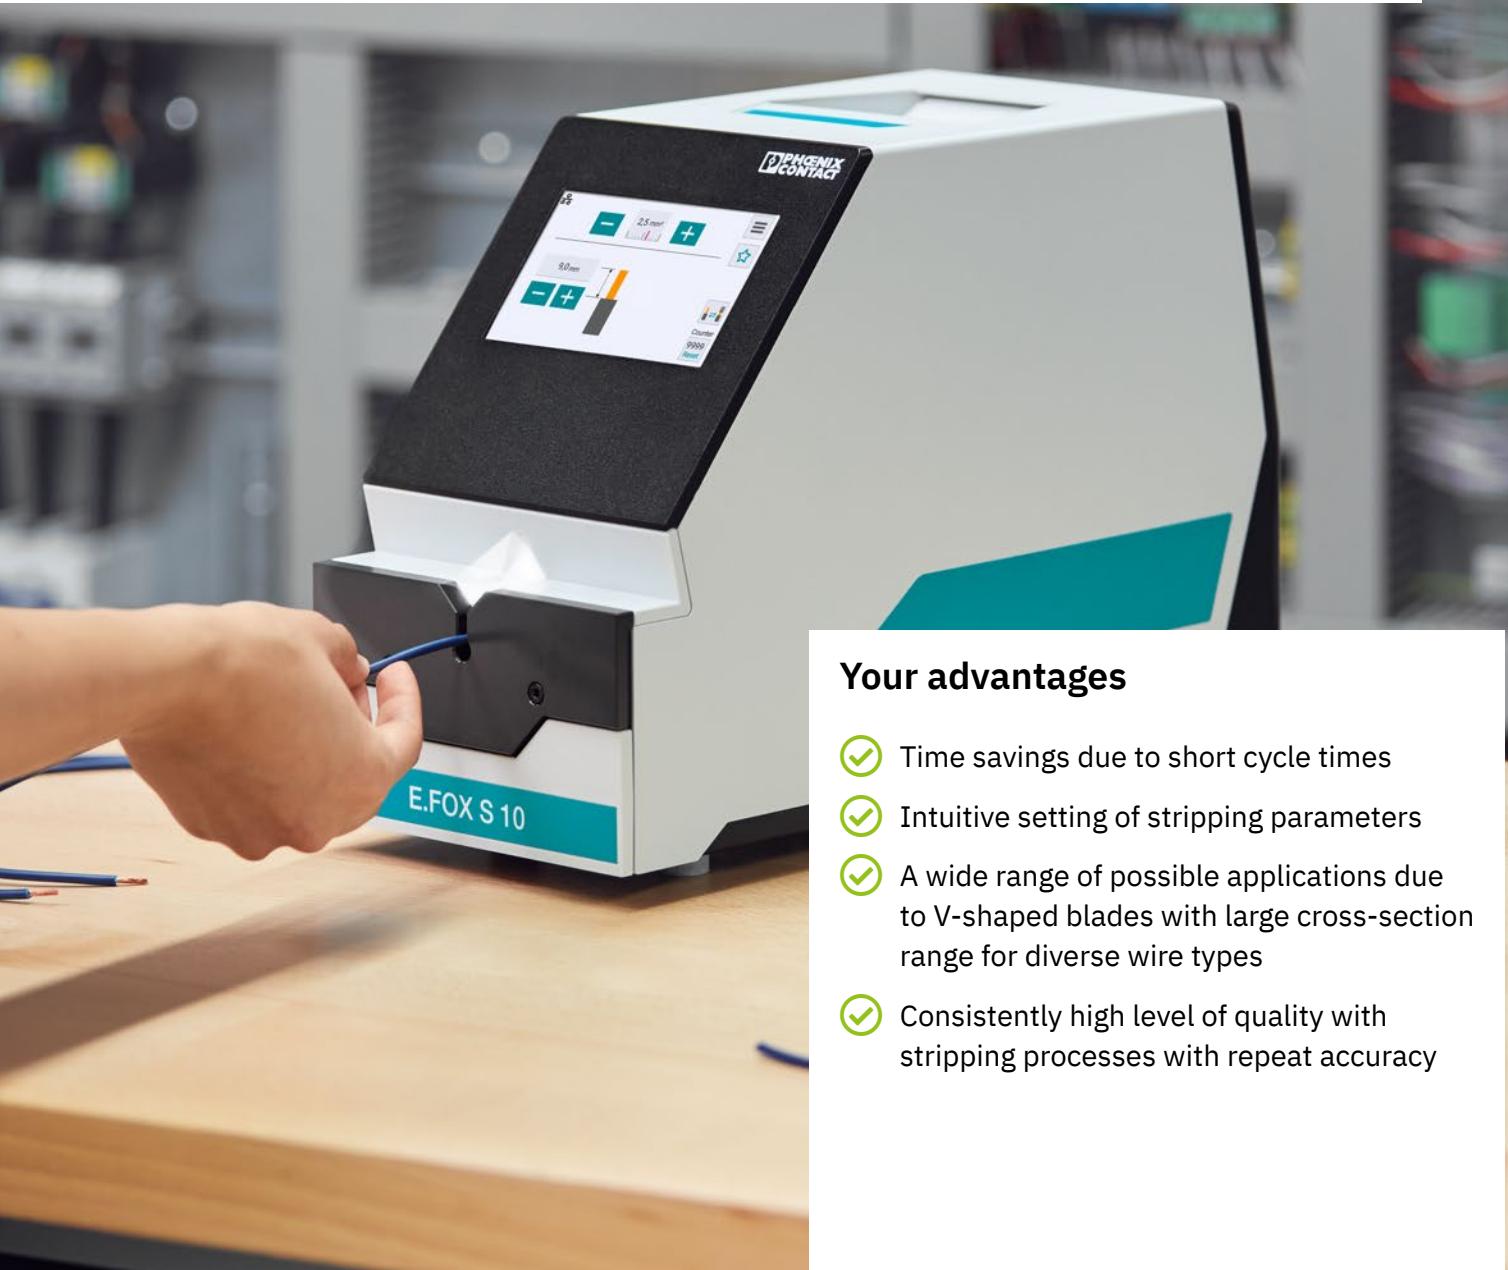

Useful addition

Keep cable rings and cable reels under control with the CUTFOX 10 C-UN cable unwinder (item no. [1208393](#)). Twisted material and the inadvertent unwinding of conductors are now a thing of the past with this accessory. The material can therefore be fed in without any disruptions and under constant tension.

Automatic stripping devices

With the compact automatic stripping devices, you can process different wire types easily in a matter of seconds. The automatic stripping devices can be used to automatically strip wires with a cross-section of up to 10 mm², and also provide the option of partial stripping. The touch display and knobs make parameter adjustment intuitive. Wires can be fed in very quickly and precisely, from the front as well as from above.

Your advantages

- ✓ Time savings due to short cycle times
- ✓ Intuitive setting of stripping parameters
- ✓ A wide range of possible applications due to V-shaped blades with large cross-section range for diverse wire types
- ✓ Consistently high level of quality with stripping processes with repeat accuracy

Efficient and smart

Optimize your wire preparation with the E.FOX S 10

With the E.FOX S 10 electric automatic stripping device, you can process wires with different cross-sections and types of insulation easily and efficiently. The compact automatic stripping device can be integrated into and controlled via worker assistance systems. Control via the clipx WIRE assist worker assistance software means that manufacturing data can be used consistently. This enables convenient and process-reliable wire preparation. Selecting favorites via a barcode scanner also provides fast access to the desired stripping parameters without the need for time-consuming settings.

Time savings

The short cycle time of 0.3 s and parameter adjustment via electric drives ensure fast stripping processes with repeat accuracy. The insertion area can be accessed from the front and from above and is also illuminated. Wires are thus fed in very quickly and precisely.

A wide range of possible applications

Special V-shaped blades that cover the entire cross-section range from 0.08 to 10 mm²/28 to 8 AWG offer a wide range of possible applications. Individual requirements are met by using additional flat blades and customer-specific shaped blades. The compact automatic stripping device enables a high degree of flexibility for working in different locations.

Easy operation

The tilted 5" touch display makes it easier to read and operate the device when seated or standing. The use of icons and the visualization of the stripping parameters facilitates intuitive use. The E.FOX S 10 thus provides impressive time savings right from the outset.

Automatic crimping devices

The universal and portable CF 500 automatic crimping device is characterized by its high pressing capacity in a compact design. With the easy and fast replacement of various die inserts, it is suitable for processing a variety of contact types up to 50 mm² and offers a high degree of flexibility. The crimping process is triggered by a foot pedal. As such, both hands are free to assemble the conductor using the corresponding contacts.

Your advantages

- ✓ Intuitive operation
- ✓ Easy commissioning with plug-and-play
- ✓ Maximum flexibility with interchangeable dies
- ✓ Easy triggering of the crimping process by means of a foot pedal

Automatic crimping devices

Automatic crimping device CF 500

- Variable opening angle
- Easy die changing
- Integrated counter that can be reset
- Two-step operation for clamping the contact
- Carrying handle for changing workstations
- Triggering of the crimping process by the foot pedal

Type	CF 500-230V	CF 500-120V

Automatic stripping and crimping devices

Two functions in one device: process wires quickly and reliably in just one step with our automatic stripping and crimping devices. Devices are available for processing single ferrules as well as ferrules supplied as a taped product. With their modular design, the stripping and crimping machines can be quickly converted to different cross-sections.

Your advantages

- ✓ Easy commissioning with plug-and-play
- ✓ Fast cross-section change due to the modular design
- ✓ Short cycle time due to perfectly coordinated subprocesses

Automatic stripping and crimping devices

CF 3000 automatic stripping and crimping device

- Tool-free conversion
- Color-coded conversion kits
- Integrated counter that can be reset
- Processing of taped ferrules
- Including case with conversion kits 0.5 mm² ... 2.5 mm²
- Suitable for class 2 and class 5 standard PVC conductors (H05V-K/H07V-K). Other conductor and insulation types can be processed to a limited extent
- Carrying handle for changing workstations

Portable automatic stripping and crimping device

Process conductors in less than two seconds with the Crimphandy from Phoenix Contact. Our portable automatic stripping and crimping device revolutionizes classic conductor processing: just one tool, just one work step, and time savings of up to 75%. Automatic monitoring functions ensure consistently high-quality crimping results.

Your advantages

- ✓ Time saving of up to 75% through combining steps and very easy operation
- ✓ Unlimited mobile use with battery operation and supply magazine
- ✓ Consistently perfect results with automatic monitoring functions

Portable automatic stripping and crimping device

Easiest operation

The automated stripping and crimping function makes operating the device easier: Insert an unprocessed wire, strip and crimp it automatically – and you're done! The portable automatic stripping and crimping device continually indicates its operating state via color LEDs. There are only operating elements for switching the device on/off and resetting it.

Optimum results

The portable automatic stripping and crimping device is equipped with capacitive sensor technology for detecting the cross-section of inserted wires. The device automatically detects if a wire does not fit, reliably preventing faulty crimping. The error is indicated via an LED.

Mobile use

The portable automatic stripping and crimping device has a powerful, easy-to-replace lithium-ion polymer battery for up to 3,000 crimping operations. This means that the portable handheld device is ready to use for several days. The fast charger charges the battery to full capacity in just one hour.

Uninterrupted work

The portable automatic stripping and crimping device has an integrated magazine for ferrules in strip form. The automatic feed allows multiple wires to be crimped one after another without interruption.

Clean working environment

The portable automatic stripping and crimping device has a lightweight, removable collecting chamber for waste insulation. This guarantees a clean working environment. It allows the device to be used inside a control cabinet.

Easy wire cutting

The CRIMPHANDY CUTTER lets you cut conductors to the right length correctly and easily. Mounting the practical cutter is quick and easy.

Portable automatic stripping and crimping device

Accessories

You will find suitable accessories for the Crimphandy and for the crimping pliers in our online shop, including:

- Ferrules
- Replacement parts (e.g., piston, hose)
- Battery
- Charger
- Cutting unit
- Holder

An overview with the corresponding accessories is provided for each item.

Cutting unit for the Crimphandy

Holder for the Crimphandy

Replacement die for crimping pliers

Worker assistance system for wire preparation

clipx WIRE assist worker assistance system

In industrial control cabinet building, processes still feature a large number of manual steps. There is still considerable potential in particular in wire preparation and processing. These time-consuming activities account for more than half of the time spent on control cabinet building. The clipx WIRE assist worker assistance system from Phoenix Contact is a "tool" for exploiting this potential as far as possible in terms of economy and efficiency.

The clipx WIRE assist worker assistance system enables efficient wire processing. The software-supported system guides users through the process of semi-automated conductor processing, automatically controls the relevant automatic tools and marking systems, and provides the necessary information based on CAE data.

Further information is available at: phoenixcontact.com/clipxwireassist

Marking systems

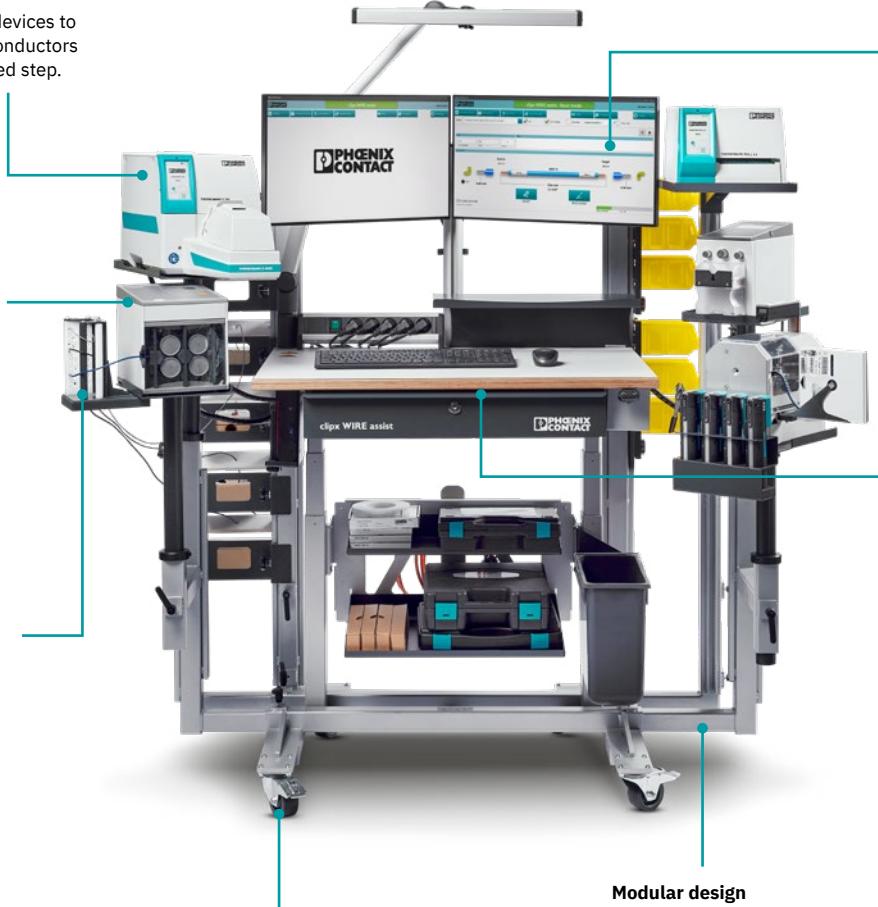

Use THERMOMARK E SERIES devices to print and install markings on conductors and cables in a single automated step.

Automatic tools

The proven automatic tools, such as the CUTFOX 10 automatic cutting device, enable a significant increase in efficiency in combination with automatic control provided by the software.

Wire supply

Depending on requirements, a wide range of different wires can be stocked and provided directly to the automatic cutting device.

Worker assistance software

The worker assistance software automatically controls the devices and intuitively guides the user through the process of wire preparation with subsequent wiring.

Height-adjustable workbench

The electrically height-adjustable worktop with pull-out drawers enables ergonomic workstation design. One advantage of this is the ability to switch between sitting and standing while working.

Mobile and flexible

Equipped with special industrial swivel casters with brakes, the clipx WIRE assist can be used wherever the work arises.

Modular design

With the corresponding accessories, the required automatic tools and printing systems can be secured directly to the workbench. The height and orientation of the devices can be tailored to the user's personal needs.

Your advantages

Process reliability and efficiency

The necessary wiring information for the software-supported completion of the processes is exported from standard ECAD systems. The information is fed into the clipx WIRE assist system. In addition, an integrated editor function also allows data to be compiled manually.

Based on this data, the worker assistance software guides the worker through the semi-automated conductor finishing process. At the same time, the system's devices are controlled directly and the necessary information for further processing and wiring is visually enhanced and automatically displayed on the monitor in an easy-to-follow format.

Modularity

The modular design of the system gives the users the freedom to arrange their workstation as desired. To save space, automatic tools and printing systems can be attached directly to the worktop of the worker assistance system using the appropriate accessories. Guides are attached to the support arms and columns to hold additional accessories.

The devices can be positioned extremely flexibly in terms of height and orientation, and their positioning can be tailored to personal needs as well as the requirements of the task at hand.

Ergonomics and mobility

The height-adjustable clipx WIRE assist workbench is designed to satisfy ergonomic requirements. One advantage of this is the ability to switch between sitting and standing while working and the system can also be adapted to the physical height of the worker and/or to the activity to be completed. Ideal positioning of the printing systems and automatic tools in the working area reduces the reaching distance, which is another ergonomic benefit.

The worker assistance system is mounted on four industrial-grade castors with brakes, making it very mobile. This means that the system can be used where the work needs to be performed, thus reducing unnecessary legwork.

Ferrules and crimp connectors

For secure and reliable connections

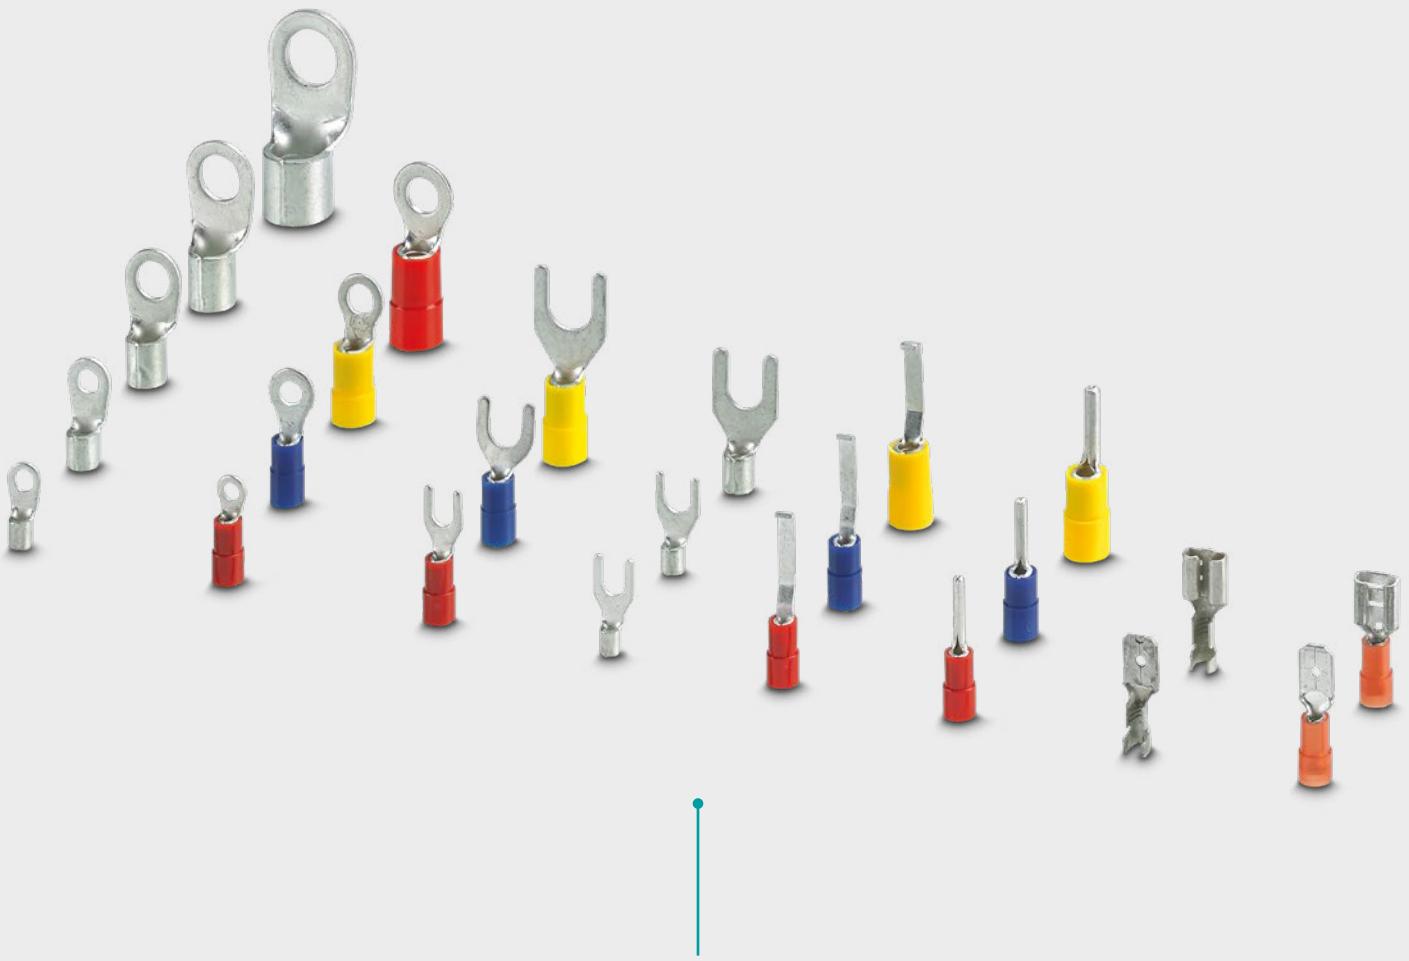

The product range from Phoenix Contact features a comprehensive range of ferrules and crimp connectors in different versions and for conductor cross-sections from 0.14 to 240 mm². Used in conjunction with our hand tools and automatic tools, you can achieve optimum and reliable crimp connections.

Ferrules

A comprehensive product range of uninsulated and insulated ferrules and TWIN ferrules in various versions and designs.

➤ More information starting on page 130

Ferrules

Ferrules are used in process-reliable conductor processing and wiring. They protect the conductors against splicing and make it easier to insert them in the clamping space. Process conductors professionally and safely with our high-quality ferrules – made in Germany. Our comprehensive product range comprising uninsulated and insulated ferrules in various versions and designs also meets the requirements of international standards.

UL-certified connection in combination with a selection of our crimping tools and automatic tools.

Ferrules

Ferrules without insulating collar

The ferrules without insulating collar are made from soft tin-plated electrolytic copper. The uninsulated sleeves are primarily used in confined environments. They protect the conductor and facilitate further processing.

Ferrules with insulating collar

Ferrules with insulating collar protect against conductor splicing and facilitate insertion into the terminal shaft. They are made from soft tin-plated electrolytic copper. The conically shaped, Easy Entry insulating collar ensures easy and correct conductor insertion.

Ferrules for two-wire connection

The insulated ferrules, also known as TWIN ferrules, are suitable for crimping two conductors in a practical way in just one ferrule. Among other things, chain bridges can be realized with this ferrule type.

Ferrules with enlarged insulating collar

These specially designed ferrules are used for processing conductors with thicker insulation. Due to the increased diameter of the insulating collar, this type of ferrule is used in particular with AWG and Multinorm cables, as well as with UL, JIS, and short-circuit conductors.

Taped and banded ferrules

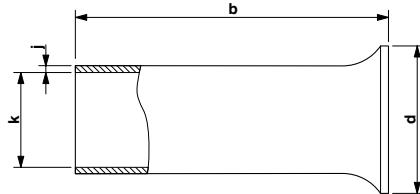

The strips are used for processing the conductors with the multifunctional CRIMPFOX 4 IN 1 crimping pliers and the mobile CF CRIMPHANDY automatic stripping and crimping device. Ferrules supplied as a taped product are used in fully and partially automated production.

Ferrule sets

Stripping and crimping sets, as well as various assortment boxes and cases, complete our ferrule portfolio. Our assortment boxes are available both empty and equipped with ferrules in various sizes and colors.

Ferrules

Ferrules without insulating collar

- UL certified
- Made from tin-plated electrolytic copper
- Design in accordance with DIN 46228-1 and UL 486F
- With "Easy Entry" (conical insertion area)
- Long-/short-term temperature: +105°C/+120°C

Ferrules

Ferrules with insulating collar, DIN 46228-4, UL 486F

- UL certified
- Made from soft tin-plated electrolytic copper
- Correspond to the requirements of DIN 46228-1 and UL 486F in terms of size
- Plastic collar made of polypropylene
- Halogen-free
- Long-/short-term temperature: +105°C/+120°C

Ferrules

Ferrules for two-wire connection

- UL certified
- Made from tin-plated electrolytic copper
- Design in accordance with UL 486F
- With "Easy Entry" (conical insertion area)
- Plastic collar made of polypropylene
- Halogen-free
- Long-/short-term temperature: +105°C/+120°C

Ferrules

Ferrules with enlarged insulating collar (e.g., short-circuit and ground fault-proof cables)

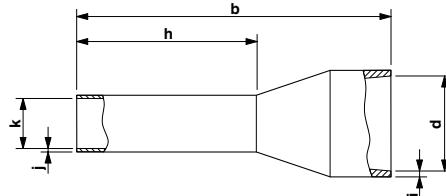

- Suitable for short-circuit-proof cables (NSGAFÖU), for example, due to the significantly increased collar diameter
- UL certified
- Made from tin-plated electrolytic copper
- Design in accordance with UL 486F
- With "Easy Entry" (conical insertion area)
- Plastic collar made of polypropylene
- Halogen-free
- Long-/short-term temperature: +105°C/+120°C

Ferrules

Ferrules with enlarged insulating collar (AWG/Multinorm)

- Suitable for AWG/multi-standard cables due to the increased diameter of the insulating collar
- UL certified
- Made from tin-plated electrolytic copper
- Design in accordance with UL 486F
- With "Easy Entry" (conical insertion area)
- Plastic collar made of polypropylene
- Halogen-free
- Long-/short-term temperature: +105°C/+120°C

Insulated ferrules as taped products (large coil)

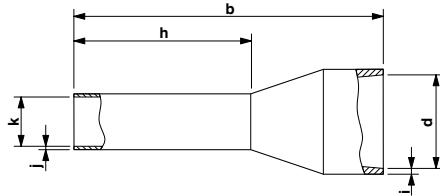

- Taped design for automated production
- UL certified
- Made from tin-plated electrolytic copper
- Design in accordance with DIN 46228-1 and UL 486F
- With "Easy Entry" (conical insertion area)
- Plastic collar made of polypropylene
- Halogen-free
- Long-/short-term temperature: +105°C/+120°C

Crimp connectors

Crimp connections are used in all areas of industry and trade. They guarantee high-quality electrical connections with long-term stability. Our comprehensive product range includes high-quality and standard-compliant crimp connectors in various versions and designs as well as colors and sizes.

Optimum crimp connections in combination with our hand tools and automatic tools.

Crimp connectors

Ring cable lugs

Ring cable lugs provide a secure and permanent connection to screw terminal blocks. They are ideal for applications where a high tensile strength is required and cover a wide range of applications, for example, in distribution boxes and connection terminal blocks.

Fork-type cable lugs

Fork-type cable lugs are designed for easy mounting, as they can be pushed onto the bolt without the screw being completely removed. They are ideal for connections that require frequent maintenance or fast connection replacements.

Pin cable lugs

Pin cable lugs are used to securely attach conductors to clamping spaces, especially where a round contact surface is preferred. They are ideal for use in devices with spring-cage terminal blocks or other connection technologies that require a round pin.

Slip-on connectors

Slip-on connectors enable quick and tool-free connection and separation of electrical components. They are always used when a reliable yet detachable connection is required.

Butt connectors

Butt connectors are used to connect two conductor ends to each other and to create a safe, electrically conductive connection. For example, they are ideal for repairs or extensions of cables that require a simple and reliable connection.

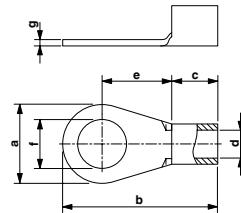

Cable lugs with additional crimp zone for conductor insulation

In addition to a mechanical connection of the conductor, these cable lugs also provide an additional crimp zone that includes the insulation of the conductor, thereby providing additional support and bend protection. They are particularly useful in applications where additional protection of the insulation against vibrations or tensile forces is required.

Crimp connectors

Ring cable lugs, uninsulated, in accordance with DIN 46234

- Design in accordance with DIN 46234
- Brazed
- Tin-plated
- Temperature range ...+110°C
